Research Protocol

Setup Checklist:

1. One computer that will be used throughout the test.
2. The same browser for each participant.
3. A test tenant with fake users.
4. A timer.

Screening Questions:

1. Have you ever used the Microsoft Office Admin portal before?
2. When is the last time you used the Office Admin portal?
3. Are you currently aware of the process for offboarding an employee?
4. Do you have any accessibility concerns regarding system administrator work?
5. Do you feel that the current Office Admin portal could be or should be changed?
6. Do you feel that the current Office Admin portal is too complex to navigate?

Consent:

This test is to measure the differences in speed and performance of the current Office admin portal and the new Offboarding Wizard. This test is to evaluate the interfaces, and not the users partaking in the study. Any difficulties in performing the tasks provided are to be factored in as a valued metric to further our evaluation of the current application. No information on individual participants will be recorded. The only two metrics that will be studied are time and efficiency.

Task:

You are the system administrator in charge of company A. John Doe has parted ways with the company. It is your job to disable his account. HR needs access to his email for the next 30 days. Lois Lane is his replacement and will also need access to his emails. She will also need access to his OneDrive.

Errors & Miss clicks:

An error is classified as a missed element from the task. If the participant forgets to forward emails for instance, that is an error. A miss click is the user clicking on another element instead of their intended one due to improper element placement or sizing. A miss click is not selecting the wrong person from a dropdown list.
